Note: Bitcoin is also a quantum ledger, it is not virtual, think exotic plasma, as we've known that our awareness affects the results of our experiments, and that information flows or behaves differently. What materialists were unwilling to consider is that matter does not come first, that information has a physical quality to it. And as they create a bubble in science and exactly in physics as they have in finance and law, then they diluted, never became aware of or mistranslated Archimedes, Newton, Einstein and…Jefferson. Before Newton, people understood that if you drop something, it falls. They didn't have a name for this phenomenon until Newton published his WP, Philosophiæ Naturalis Principia Mathematica (Latin for Mathematical Principles of Natural Philosophy), commonly known as the Principia. In Jefferson's day? He acted to establish Uniformity in Weights, Measures and Coins so that nobody could cheat you and you didn't need anyone else's help nor would you need a banker's scale, a $1 coin would always be a $1 coin, you would be able to instantly know if someone was cheating you, or, you could weigh it in any old scale that was actually set to 0. And not one human ever understood what Jefferson was doing until I,Satoshi, came along and realized that we had done the same thing, only he did it in 1790 with a pendulum, metronome, a weight or bob and a wooden rod in place of a metal cylinder and I did it beginning in 1996 and using formal advanced math and physics and what's digital and what's quantum, as I cracked human consciousness vs human conscious awareness! As Jefferson is the person who originally weighed the difference. He died unaware of this as what we know of as electromagnetism was a known phenomenon but it wasn't named and quantified until:

Oersted's Breakthrough (1820)

• The Experiment: Danish physicist and chemist Hans Christian Ørsted was preparing for a lecture on April 21, 1820.
• The Observation: He placed a compass near a live wire connected to a voltaic pile (an early battery) and saw the compass needle snap perpendicular to the wire.
• The Meaning: It proved for the first time that electricity and magnetism were linked forces, showing that a moving electric current creates a magnetic field.

Expanding the Theory (1820s–1830s)

André-Marie Ampère: Quickly expanded on Ørsted's work to formulate mathematical laws describing magnetic forces between current-carrying wires.

Michael Faraday & Joseph Henry (1831): Discovered the reverse process—**electromagnetic induction**—proving that a moving or changing magnetic field can generate an electric current in a conductor.

James Clerk Maxwell (1865): Unified electricity, magnetism, and light into a single set of fundamental equations (Maxwell's equations)

When you invest in a company or thing, you invest in the person or persons who are the company or thing! If you bet on Elon Musk, the bad news is: if you ‘succeed’ by always being the exception to the rule of law, you haven't succeeded at anything except the con, and really, what does he do? He lies and says that he has tech such as self driving tech when he doesn't. First he gets your money and then he attempts to it the people who will create it for him, and as he began by jacking us for $4 billing when he had collateral but wasn't made to ante up, and when everybody else had to submit a business plan, he did not. How is this suffering? It isn't, level the playing field and watch them lose the ability to function

Quote, from Reddit: When did you know that Elon Musk wasn't a genius super engineer from space?

“I said this in another thread bu I realized he wasn't our Lord and savior when announced the model 3 in 2016 as opposed to a "crossover" and “when he came to Denmark years ago to complain about electric cars losing their tax rebate. That's when I began to realize that
